NOTES & DEFINITIONS

- GROWTH FACTOR

2010 service population / 1999 service population
- GROWTH AREA

Additional space needed to provide current level of services for population anticipated for 2010
Calculated by multiplying the growth factor times current area, then subtracting current area
- FUNCTIONAL NEEDS AREA

Additional area required to meet today’s program needs
Needs identified by librarians; space calculated by applying standard unit allocations
Note that requests for additional shelving area for existing collection types have been included with “growth” needs; only shelving for new collection categories is listed in this section.

¹ Provo Library did not provide individual area breakdowns and capacities, so benchmark figures are based on general ratios indexed to size of service population and holdings. Because the library has recently moved into a new facility, it reported no current functional needs.

² Salt Lake City Library System figures use the area of the existing main branch (not the new library currently under construction). The new main library will have approximately 240,000 square feet. The system did not identify current functional needs in sufficient detail to allow projection of areas needed for the other libraries in the system; the figure listed represents the difference between the current area of the main library and the programmed area of the new main library.
